

PROCESS SAFETY MANAGEMENT (PSM) - PART 2 OF 3

This is part 2 of a 3 part presentation on Process Safety Management. A link to part 1, the overview, will be provided for those that wish to catch-up on the series.

Every process site has its own distinctive set of challenges and safety concerns. That is why there is no single best approach to mitigating risk or solving safety issues. But management regulations or guidelines like PSM exist so that organisations can take a well-thought-out blueprint and adjust it to their specific needs.

This session will focus on the 13 elements that form an effective PSM system. We will discuss what measures should already be in place and providing examples of why the Sigma-HSE approach is effective at delivering a unifying culture of safety within your organisation.

At the start of the session we will summarise our previous PSM presentation as an introduction to the more detailed explanation of the 13 Elements of our System. Please follow the below link to register for part 2:

[Register Now!](#)

This [webinar](#) will provide an understanding of;

- **The 13 Elements of PSM based on internationally recognised standards.**
- **A breakdown of each PSM element**
- **Examples of effective PSM outcome in the workplace.**

REGISTRATION
